

SQL Fundamentals – SELECT FROM WHERE

Create SQL commands to provide information for the following problems.

1. S-T Database: List students with the last name of KRY. Show the ID, full name and major.
2. S-T Database: List how many evaluations were done in the spring. Don't list the data just the number of evaluations.
3. S-T Database: List the evaluations done by Barbara Kry. (Hint: Barbara's ID is 'bkry' and she was the evaluator if she did the evaluation.) List all the columns in the table.
4. AW2008: List persons (not just employees) with the last name Adams. Show the first name, last name, and business entity ID.
5. AW2008: List how many people have the last name Adams. List only the count.

What to do:

1. In one file write all the SQL commands.
2. Before each command add the problem statement as a comment line.
3. The file must be simple text file with a TXT or SQL file extension. File need to be saved with your last name_SQL_STATEMENT_USED, and your name should be included in a comment line format
4. Test your commands and make sure they are error-free before submitting the solution file.

Refer to the book and Chapter 3 powerpoint for examples.
