## What is Smartsheet?

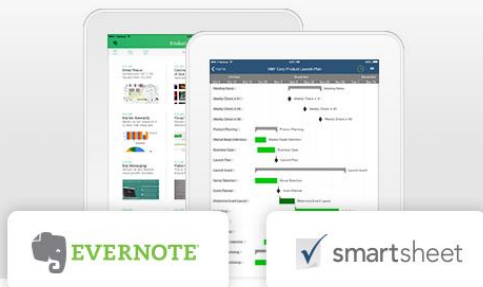

Smartsheet for iPhone/iPad is a mobile companion to the online work collaboration tool. It combines familiar spreadsheet interface with file sharing, automated workflows, and interactive Gantt charts. From complex processes to simple task lists, you have the flexibility to manage any kind of work.

## How can I use Smartsheet?

Smartsheet is an application that can be run on iPhones and iPads, but works hand in hand with the online tool for desktops. It allows supervisors to be active and involved in the field during the project, rather than forcing them to sit in a desk all day. Not only does it make your project more accessible, it can work with simple tasks and lists and can also handle complex processes. It allows you to upload documents and set different alerts and deadlines.

## Compatible with Evernote

Create, Plan and Do. Together.

Additionally, Smartsheet is compatible with Evernote, an application used for note taking, list making and allows you to sync all of your devices so that these are accessible to you at all times.

## “As easy as a spreadsheet”

Smartsheet uses a generally familiar template that allows every new member and team a chance to hit the ground running without the necessity of extensive training. Thus, the project becomes more efficient and will be completed faster.

## Customizable

Smartsheet gives you the opportunity to customize and adapt their format to anything that might pertain to your project. While they offer this customizable options, they provide a multitude of different templates to choose from, and from there you can modify the template to meet your necessities. For example, they offer:

- Project Plan Template
- Gantt Chart Template
- Sales Pipeline Template
- Marketing Calendar Template
- Event Planning Checklist Template
- Contact Management Template
- Project Budget Template

And many more.....

## Rating

Interestingly enough, Smartsheet has not received enough ratings to display an average rating on the app store. I don't know if that is a good or bad thing. However, after playing around with the different features offered by this app, I was rather impressed. I have used Evernote before, and this app provides a very similar simple template that you can use for many different tasks and projects. Here is a review from a user:

*“[Smartsheet] was exactly what we needed to knock down the communication silos in our company. With Smartsheet, my team can track and participate in business operations from any office location, on the road, or in the fields.” Steve Scaroni, Founder, Vegpacker.*
